ABSTRACT

‘Tourism Geography’—a sub-discipline which has emerged as a well-developed branch of geographical studies in India, although this field demands attention of geographers to a wide range of areas, the current trend in India is inclined towards few aspects like trends of tourism flow, impacts of tourism on the environment or the sustainability of tourism, with some attention also focused on specific purpose tourism like adventure, sports, health and nature tourism. Feasibility of development of new potential destinations needs to be explored so that the benefits of tourism industry are homogeneously distributed. Geographical research in tourism should act as impetus to diversification of tourism into less developed and inaccessible areas. Geographers, especially in India, have given rather sparse consideration regarding this area. The past studies of research in geology bear declaration to it. The present part gives a concise record of the work done amid a limited ability to focus seven years (2003–9) in this field. It is proposed to survey the current situation with inquire about in transport topography by sorting out the accessible material as indicated by real topics, for example, general hypotheses and standards, organize evaluation, activity stream examinations, local transport, urban and country transport, and transportation arranging/improvement.
