Research Scholar, Ph. D. in Psychology, Dr. A.P.J. Abdul Kalam University, Indore M.P., India

ABSTRACT

Psychological impairments are sometimes referred to as "invisible disabilities" since they are difficult to identify. Faculty, staff, and students are often unaware that a fellow student has a psychological condition. Students may be hesitant to seek assistance for a psychological condition because of the stigma and myths surrounding diagnosis and treatment. Many students with a psychological handicap keep their diagnosis and condition to themselves. SSD advises them to share accommodation letters with academics and employees but not disability details. Please abstain from inquiring about a student's specific kind of handicap.
